

Ventzke Media

**We create digital products
that enhance the world
around us.**

About us

Ventzke Media is a Berlin-based software development & web development agency specializing in UX design, front-end development and the implementation of real-time 3D product configurators. Since 2008, our senior product team has worked with mid-sized companies, start-ups up to global brands to develop high-quality software, apps as well as websites and support development teams.

End-To-End Implementation of the Social Dating App coopz

The Client

coopz is a social dating app to meet interesting people based on interests, personal characteristics and favorite places. With coopz there is no classic picture swiping, but a matching (score) based on an intelligent algorithm. In addition, users can create locations that send automatic notifications when entered.

Disciplines

Product development

Startup accelerator

Digital branding (logo & social media & motion design)

Prototyping & UX design

Agile engineering (native app & website & CMS)

The Challenge

There are dozens of challenges to overcome when developing and marketing a digital product. We had to develop a positioning algorithm (GPS) that does not consume a lot of battery power (smartphones). In addition to app development, sales (online marketing) also became the core task of the project.

Milestones

2015: Prototype development (MVP)

2016: Design system / branding

2017: Start development Android app

2018: Launch android App / start iOS app development

2019: Launch iOS App / Online Marketing

2020: Development coopz 2.0

2021: Integration AI-based matching

Our Solution

Thanks to the intelligent algorithm for position determination (GPS), current location positions can be calculated and fully automatic push notifications can be sent. In addition, the UX was adapted again and again to achieve better KPIs (daily active users, retention, etc.). With targeted marketing, over 100,000 downloads and could be generated.

Features

Innovative OnBoarding (interests, locations, etc.)

Proprietary GPS update algorithm

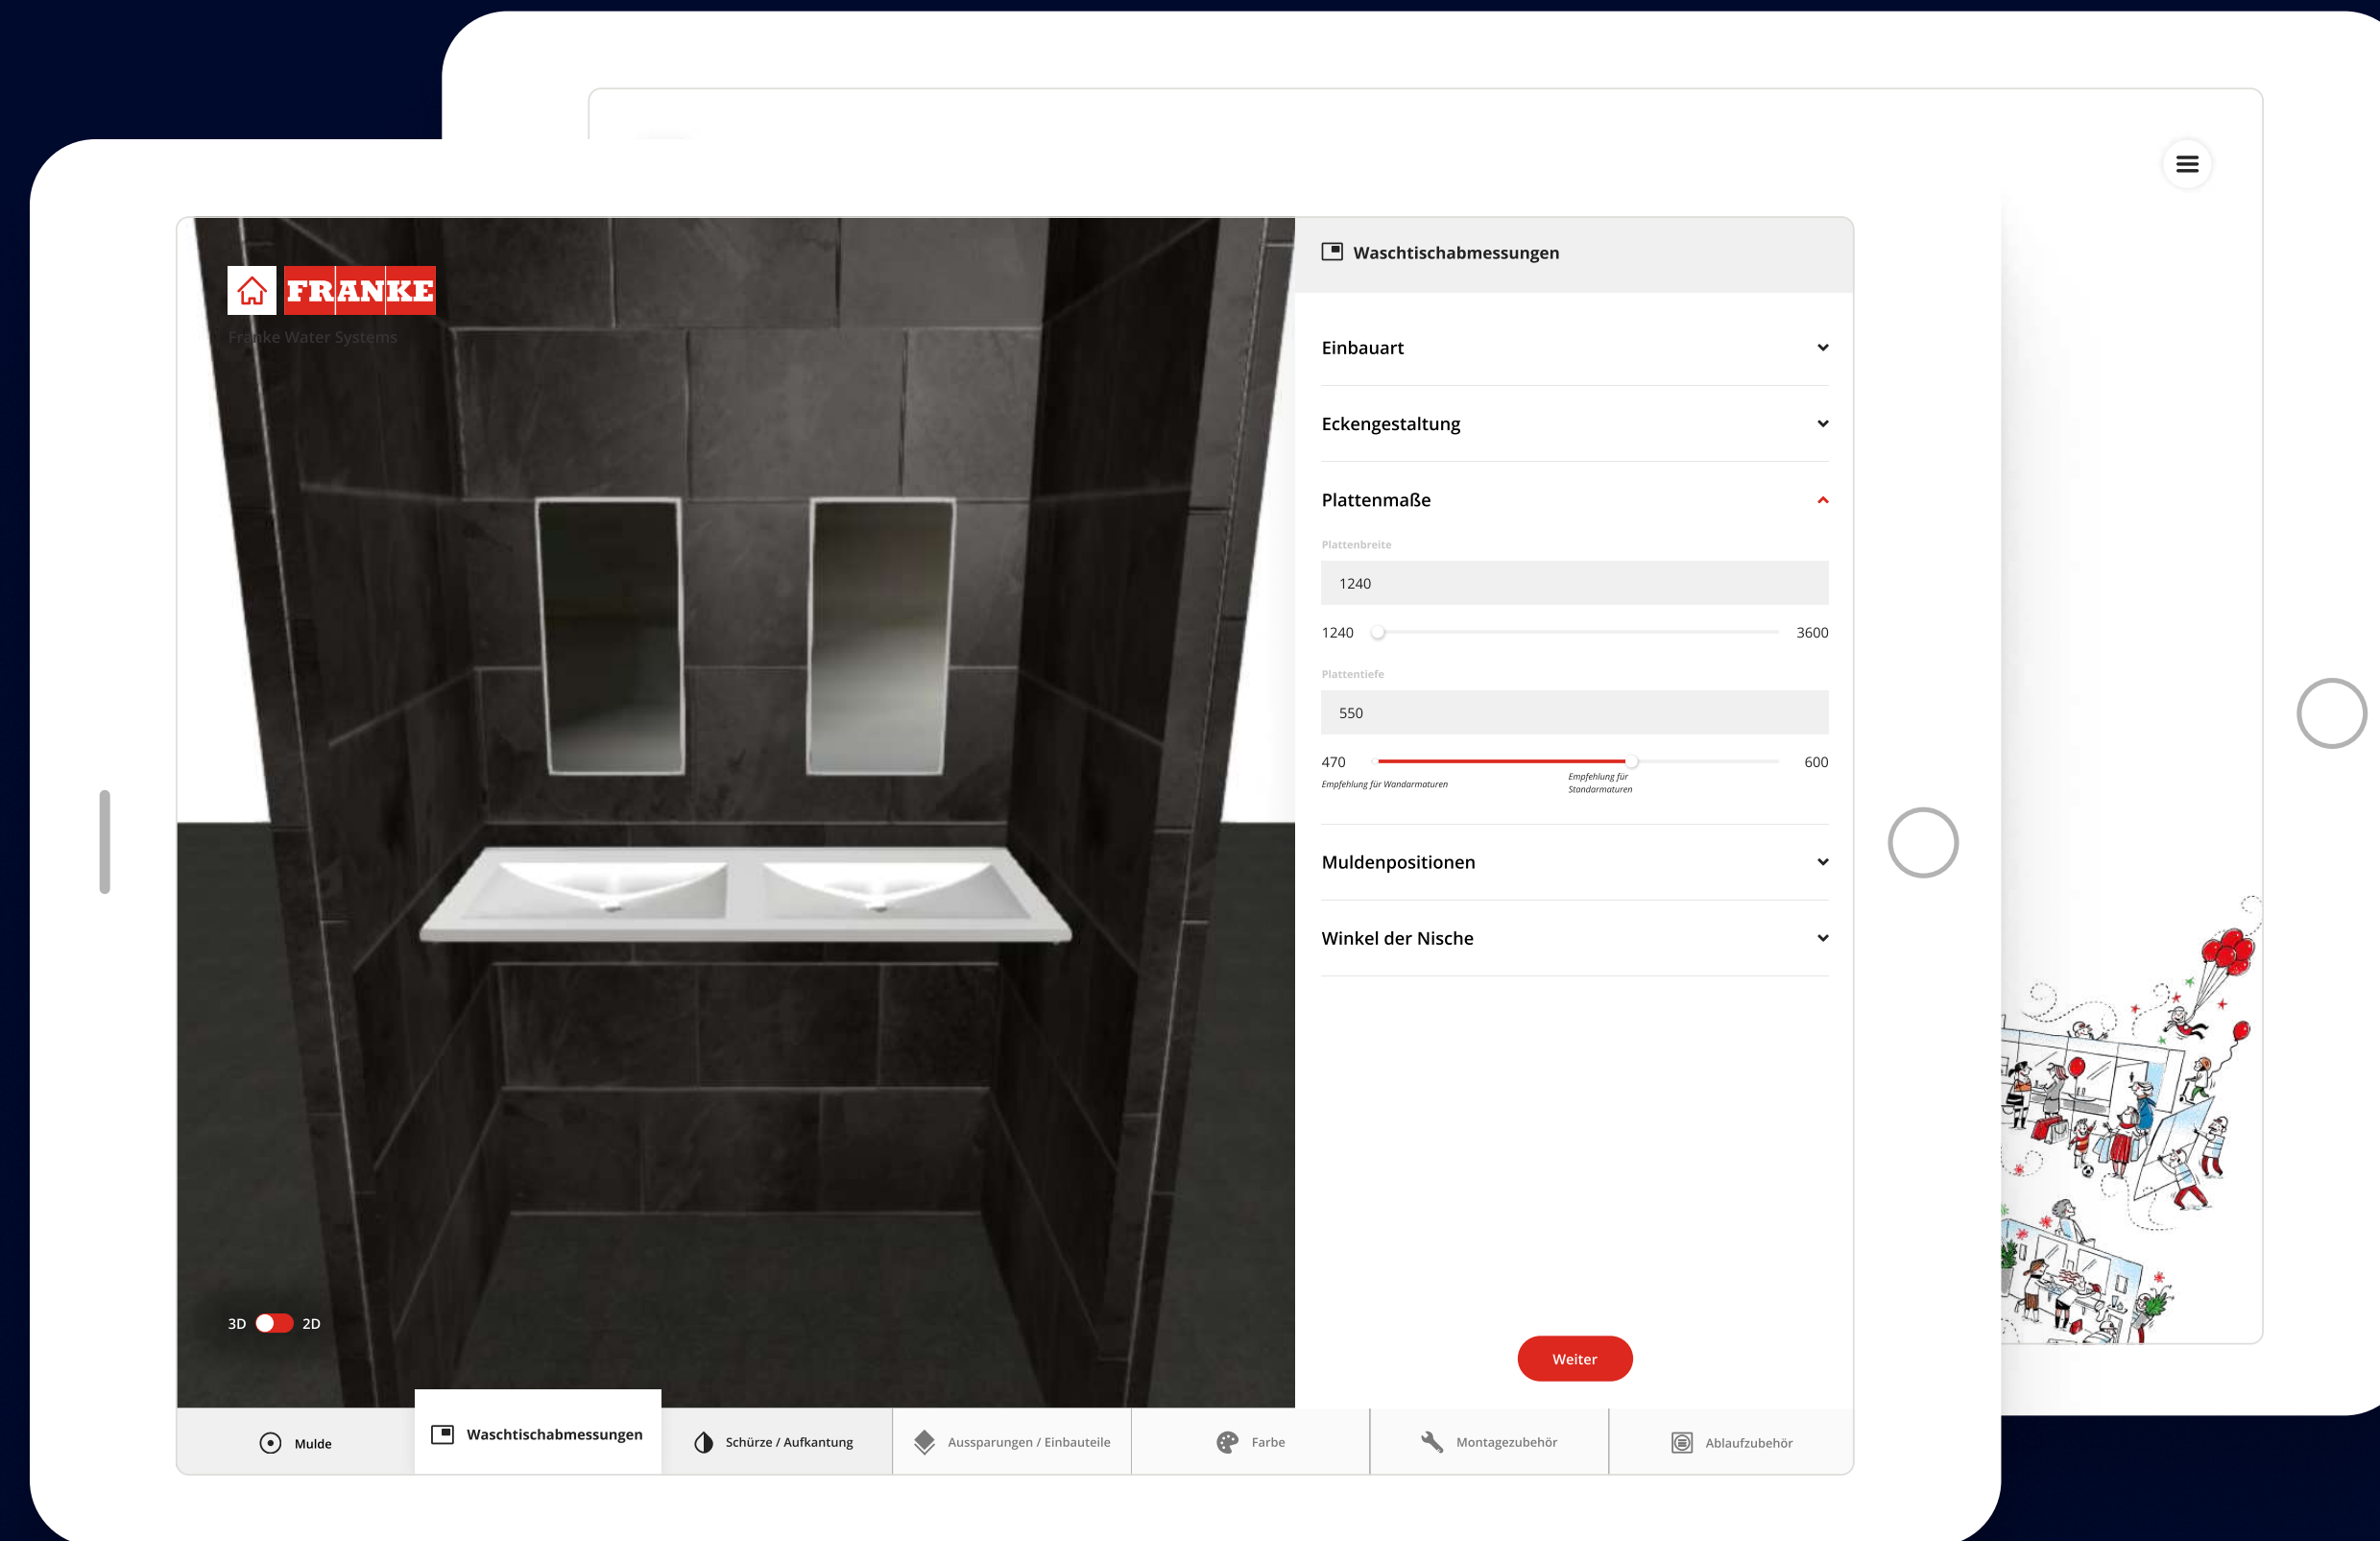

Optimized battery consumption

Premium functions

Smart push messages

Location sharing & geofencing

AI-based matching

3D Configurator as Sales & Pricing Tool for Global Players

The Client

Franke Water Systems is one of the world's leading suppliers of innovative and intelligent washroom and sanitary solutions for the public, semi-public and commercial sectors. Franke is particularly committed to the development of complete sanitary systems that are designed for durability, excellent quality, functionality and design.

Disciplines

Product development & workshops

Prototyping & UX design

Software engineering

3D modeling

Integration cloud hosting (Microsoft Azure)

Tech consulting

Team as a service

The Challenge

The information and ordering process for complex products such as Franke washbasins had potential for optimization. Before the project began, the processes for customers were relatively long, non-transparent and involved time-consuming steps for employees. These processes were digitized and optimized to achieve higher customer satisfaction and cost savings.

Milestones

2018: Design thinking / start collaboration

2019: Launch MVP / presentation ISH trade fair

2020: Continuous delivery / technical drawings

2021: CD / internal area

2022: CD / conversion SAP S/4 HANA

Our Solution

A touchpoint-enabled product configurator was designed that allows users to digitally configure vanities. The 3D configurator provides real-time feedback on technical feasibility and a price estimate. Based on the automatically generated technical drawing, washbasins can be manufactured directly in the factory. The configurations created are also transferred to the SAP system.

Features

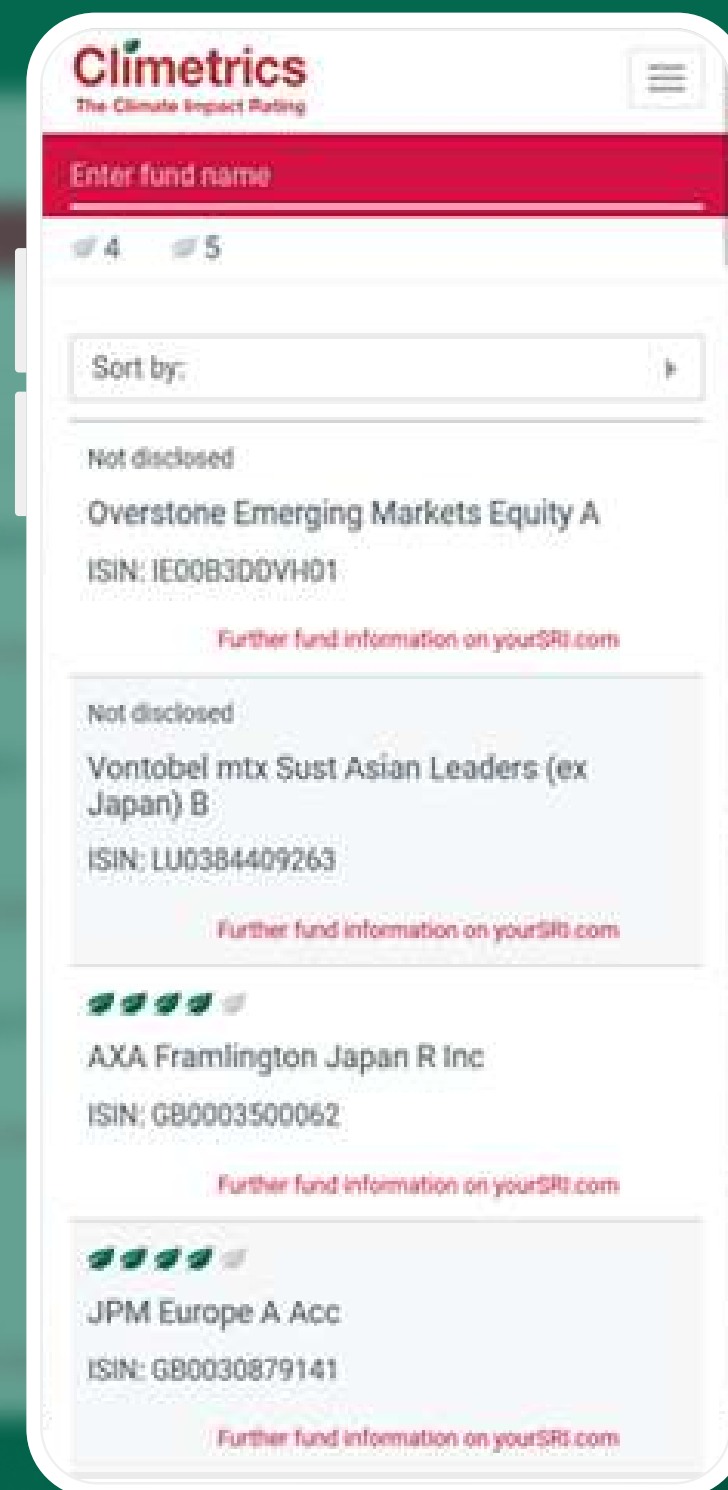

2D & 3D product configuration

Quotation & technical drawing (PDF)

Multilingualism & connection to SAP

Progressive Web App (PWA)

Assignment of employees via postal code areas

#finances #webapp #angular

The world's first climate rating for equity products

The client

Climetrics is an independent fund assessment that enables investors to integrate climate change impacts into their investment decisions. Using the most advanced metrics available, Climetrics has developed an independent, rules-based and transparent methodology to communicate the overall impact of mutual funds on climate change.

Disciplines

Prototyping & UX-Design

Agile Engineering (Frontend / Backend)

Web-App

The Challenge

At the end of 2016, we, as a Berlin web agency, were awarded the tender of CDP Europe. An agile agency was sought for the development of a web application for the presentation of climate-neutral funds rated by Climetrics.

Milestones

2016: Tender won

2017: Launch web app

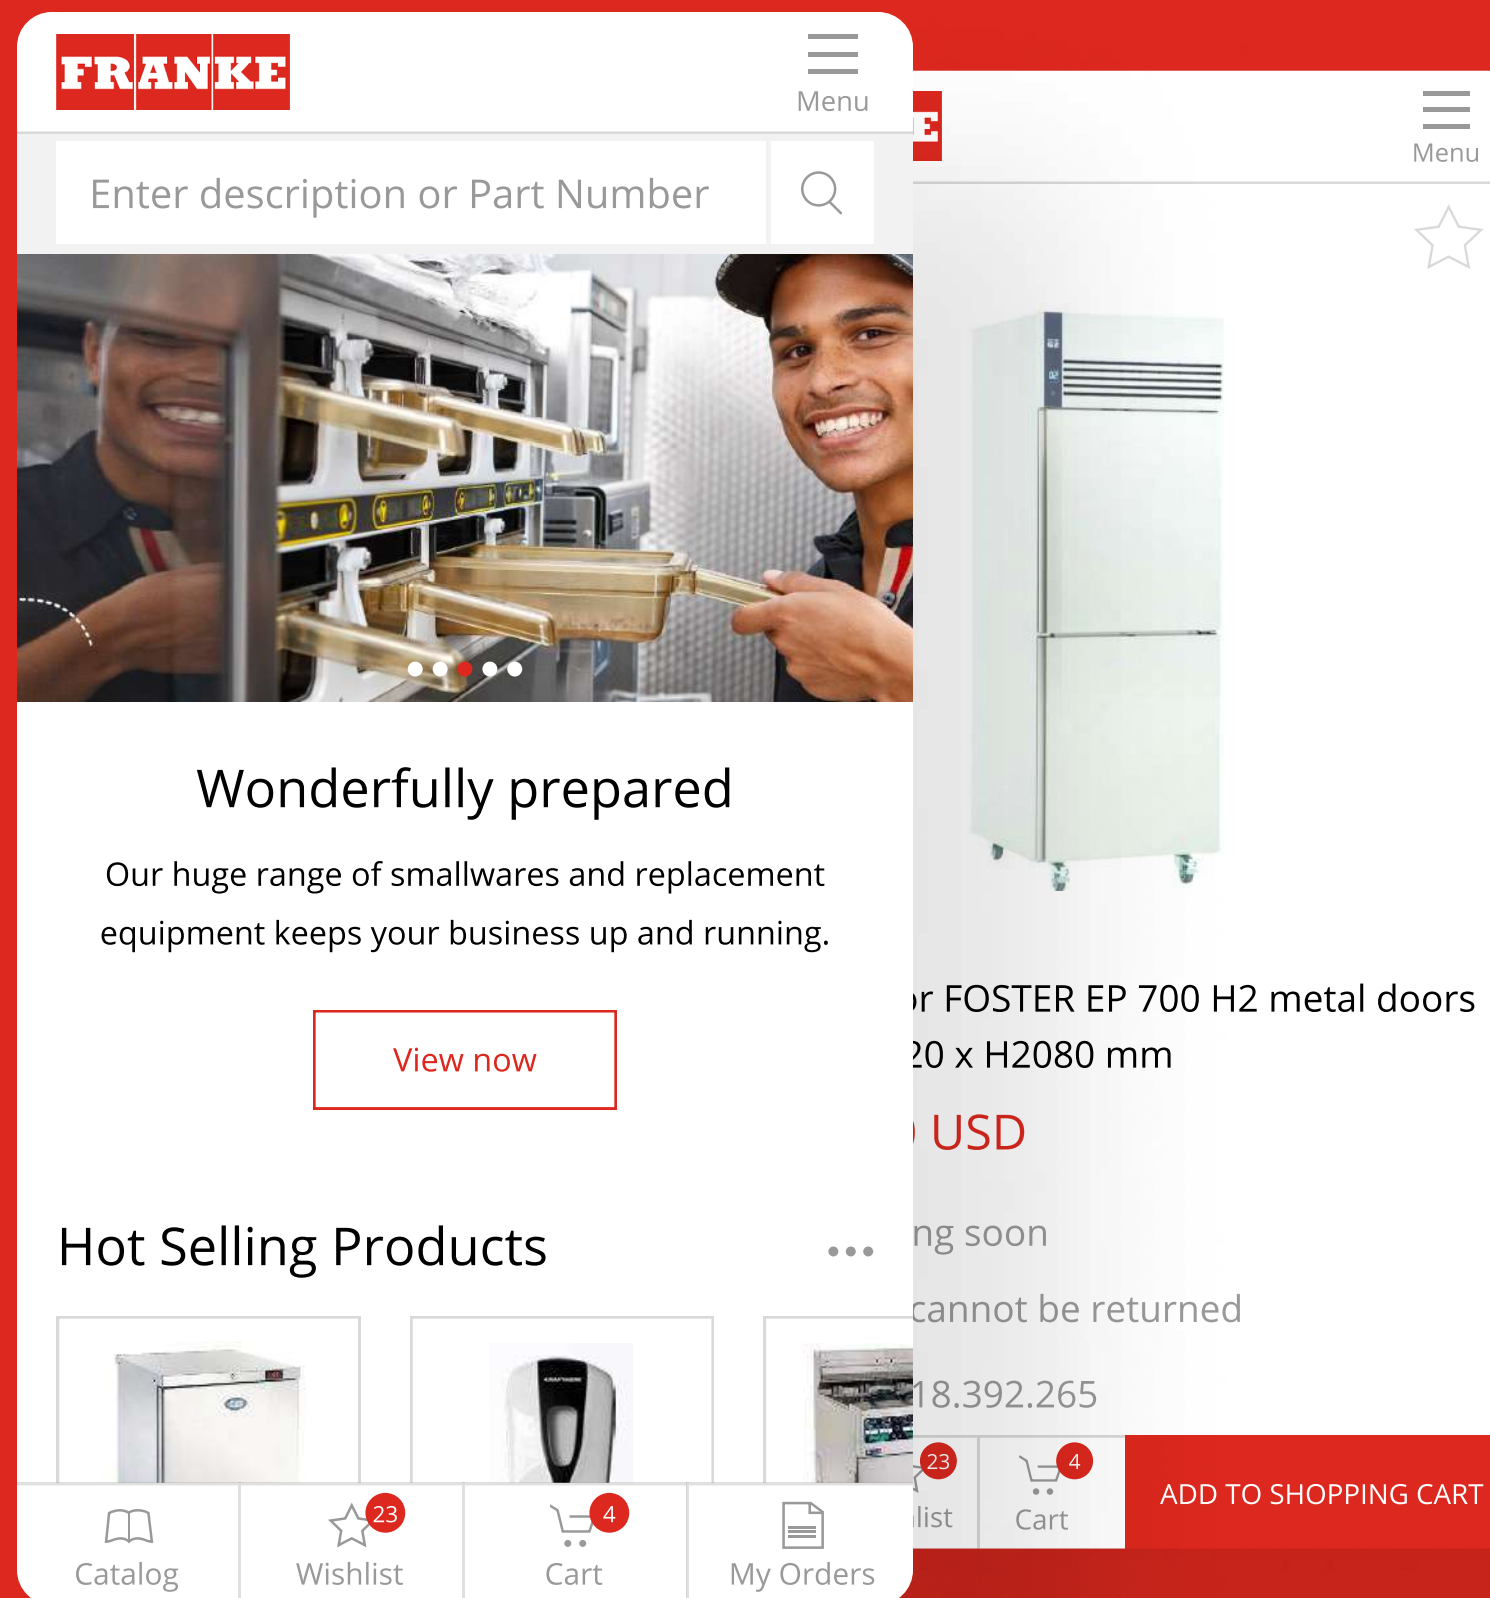

Our Solution

The result of the project work is a high-performance web application based on AngularJS, which allows to retrieve all 40,000 fund data in real time using REST API. For the backend of the application we used the MEAN stack, which consists of the NoSQL database MongoDB, the server-side framework Express, the client-side framework Angular and the server-side platform Node.js.

Features

Connection to fund database

REST API

International Relaunch of the Franke E-Commerce Platform

The Client

In foodservice – as the name suggests – it's the service that counts! With over 50 years of experience in planning, installing, and maintaining custom kitchens for major players in the foodservice industry worldwide, as well as for startups with ambitious goals and fresh ideas, Franke knows what really counts.

Disciplines

Workshops

Prototyping & UX design

Agile project management

Agile engineering (frontend)

Maintenance

Tech consulting

Team as a service

The Challenge

A project managed by an interdisciplinary team located in different time zones around the world. Franke's old e-commerce platform was not mobile compatible and technically completely outdated. So the challenge was an agile project management (coordination UX, backend & frontend) and an iterative approach.

Milestones

2017: Workshops / prototyping / concept UX & UI

2018: Iterative launch of the new webshop

2019: Continuous delivery / platform expansion

2020: Platform expansion / React update

2021: Revision of the UX for the Asian market

2022: Implementation of new features

Our Solution

After a screening, Franke Foodservice chose the Berlin-based React experts Ventzke Media as their new digital agency partner in Germany. The B2B webshop, which is used daily by major players in the system catering industry worldwide, was redesigned and implemented as a responsive React single-page application (PWA).

Features

High-performance e-commerce frontend in 12 languages

Search / watch list / product filter / promotions

OnePage checkout for optimal conversion

Progressive Web App (PWA)

50+ individual views (templates)

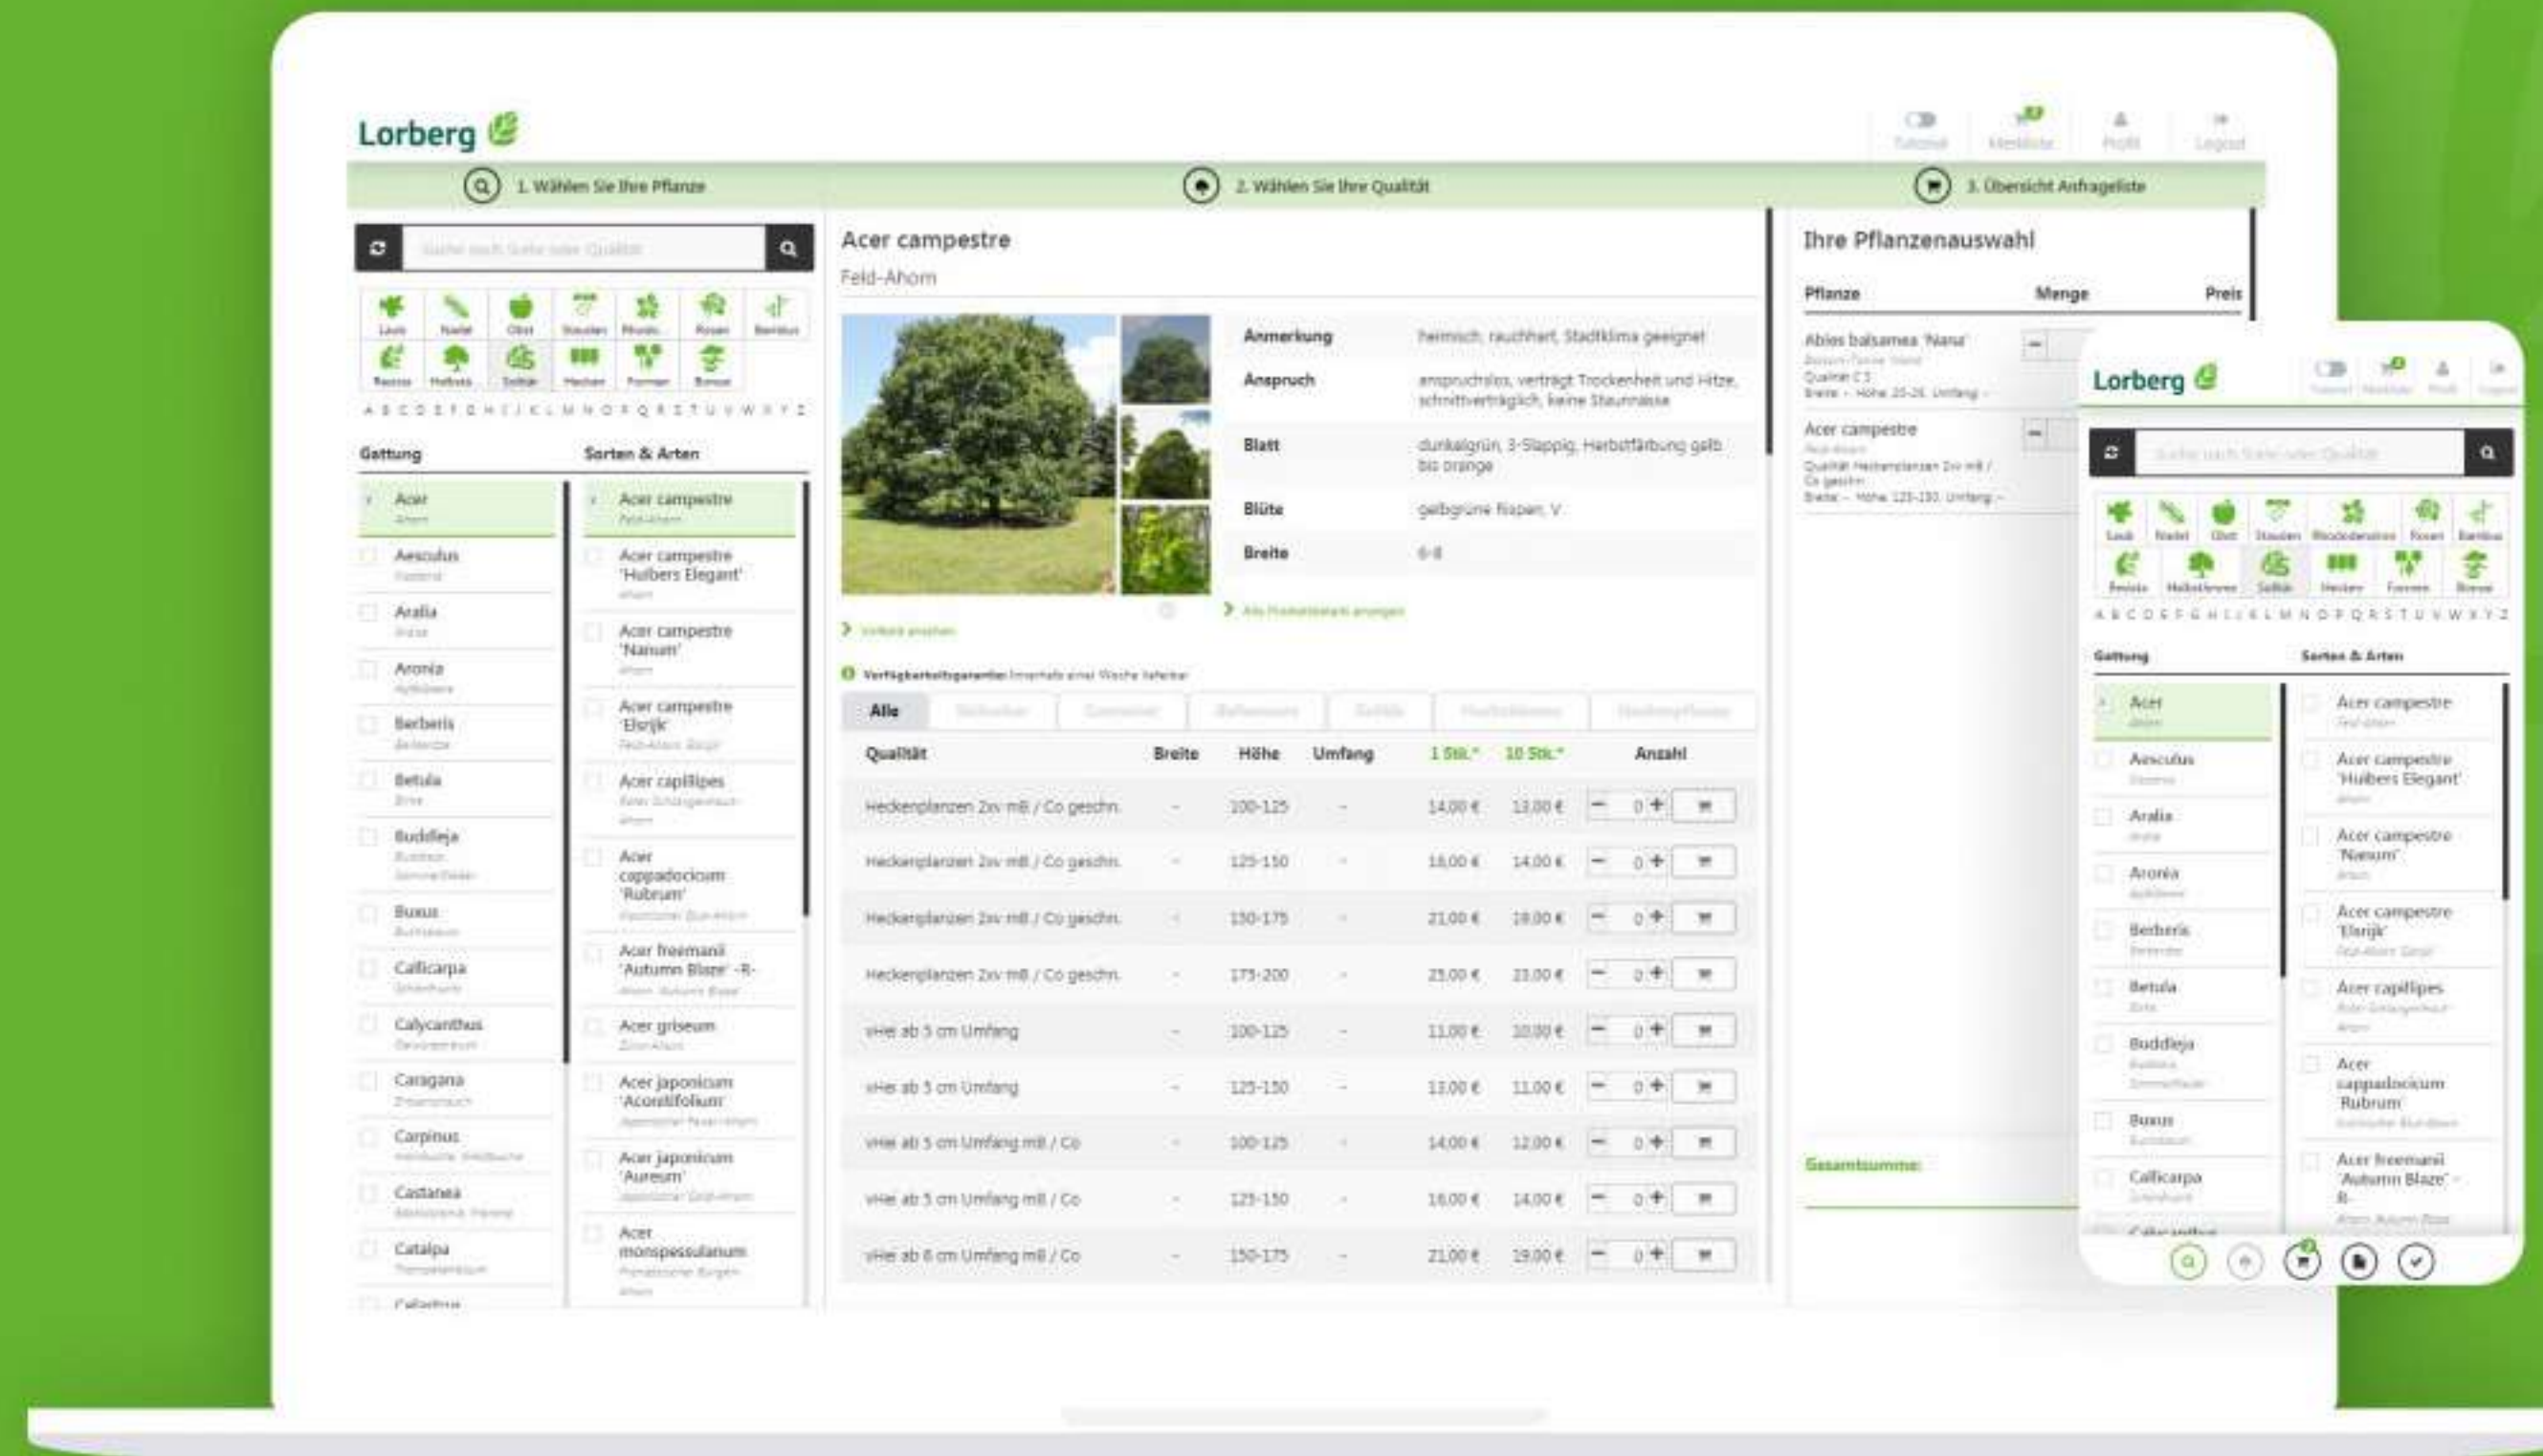

Secured log-in / registration process

"For us, this means Ventzke Media is no longer just an agency, but a partner."

Dani Rayford, Business Systems Analyst, Franke Management Inc.

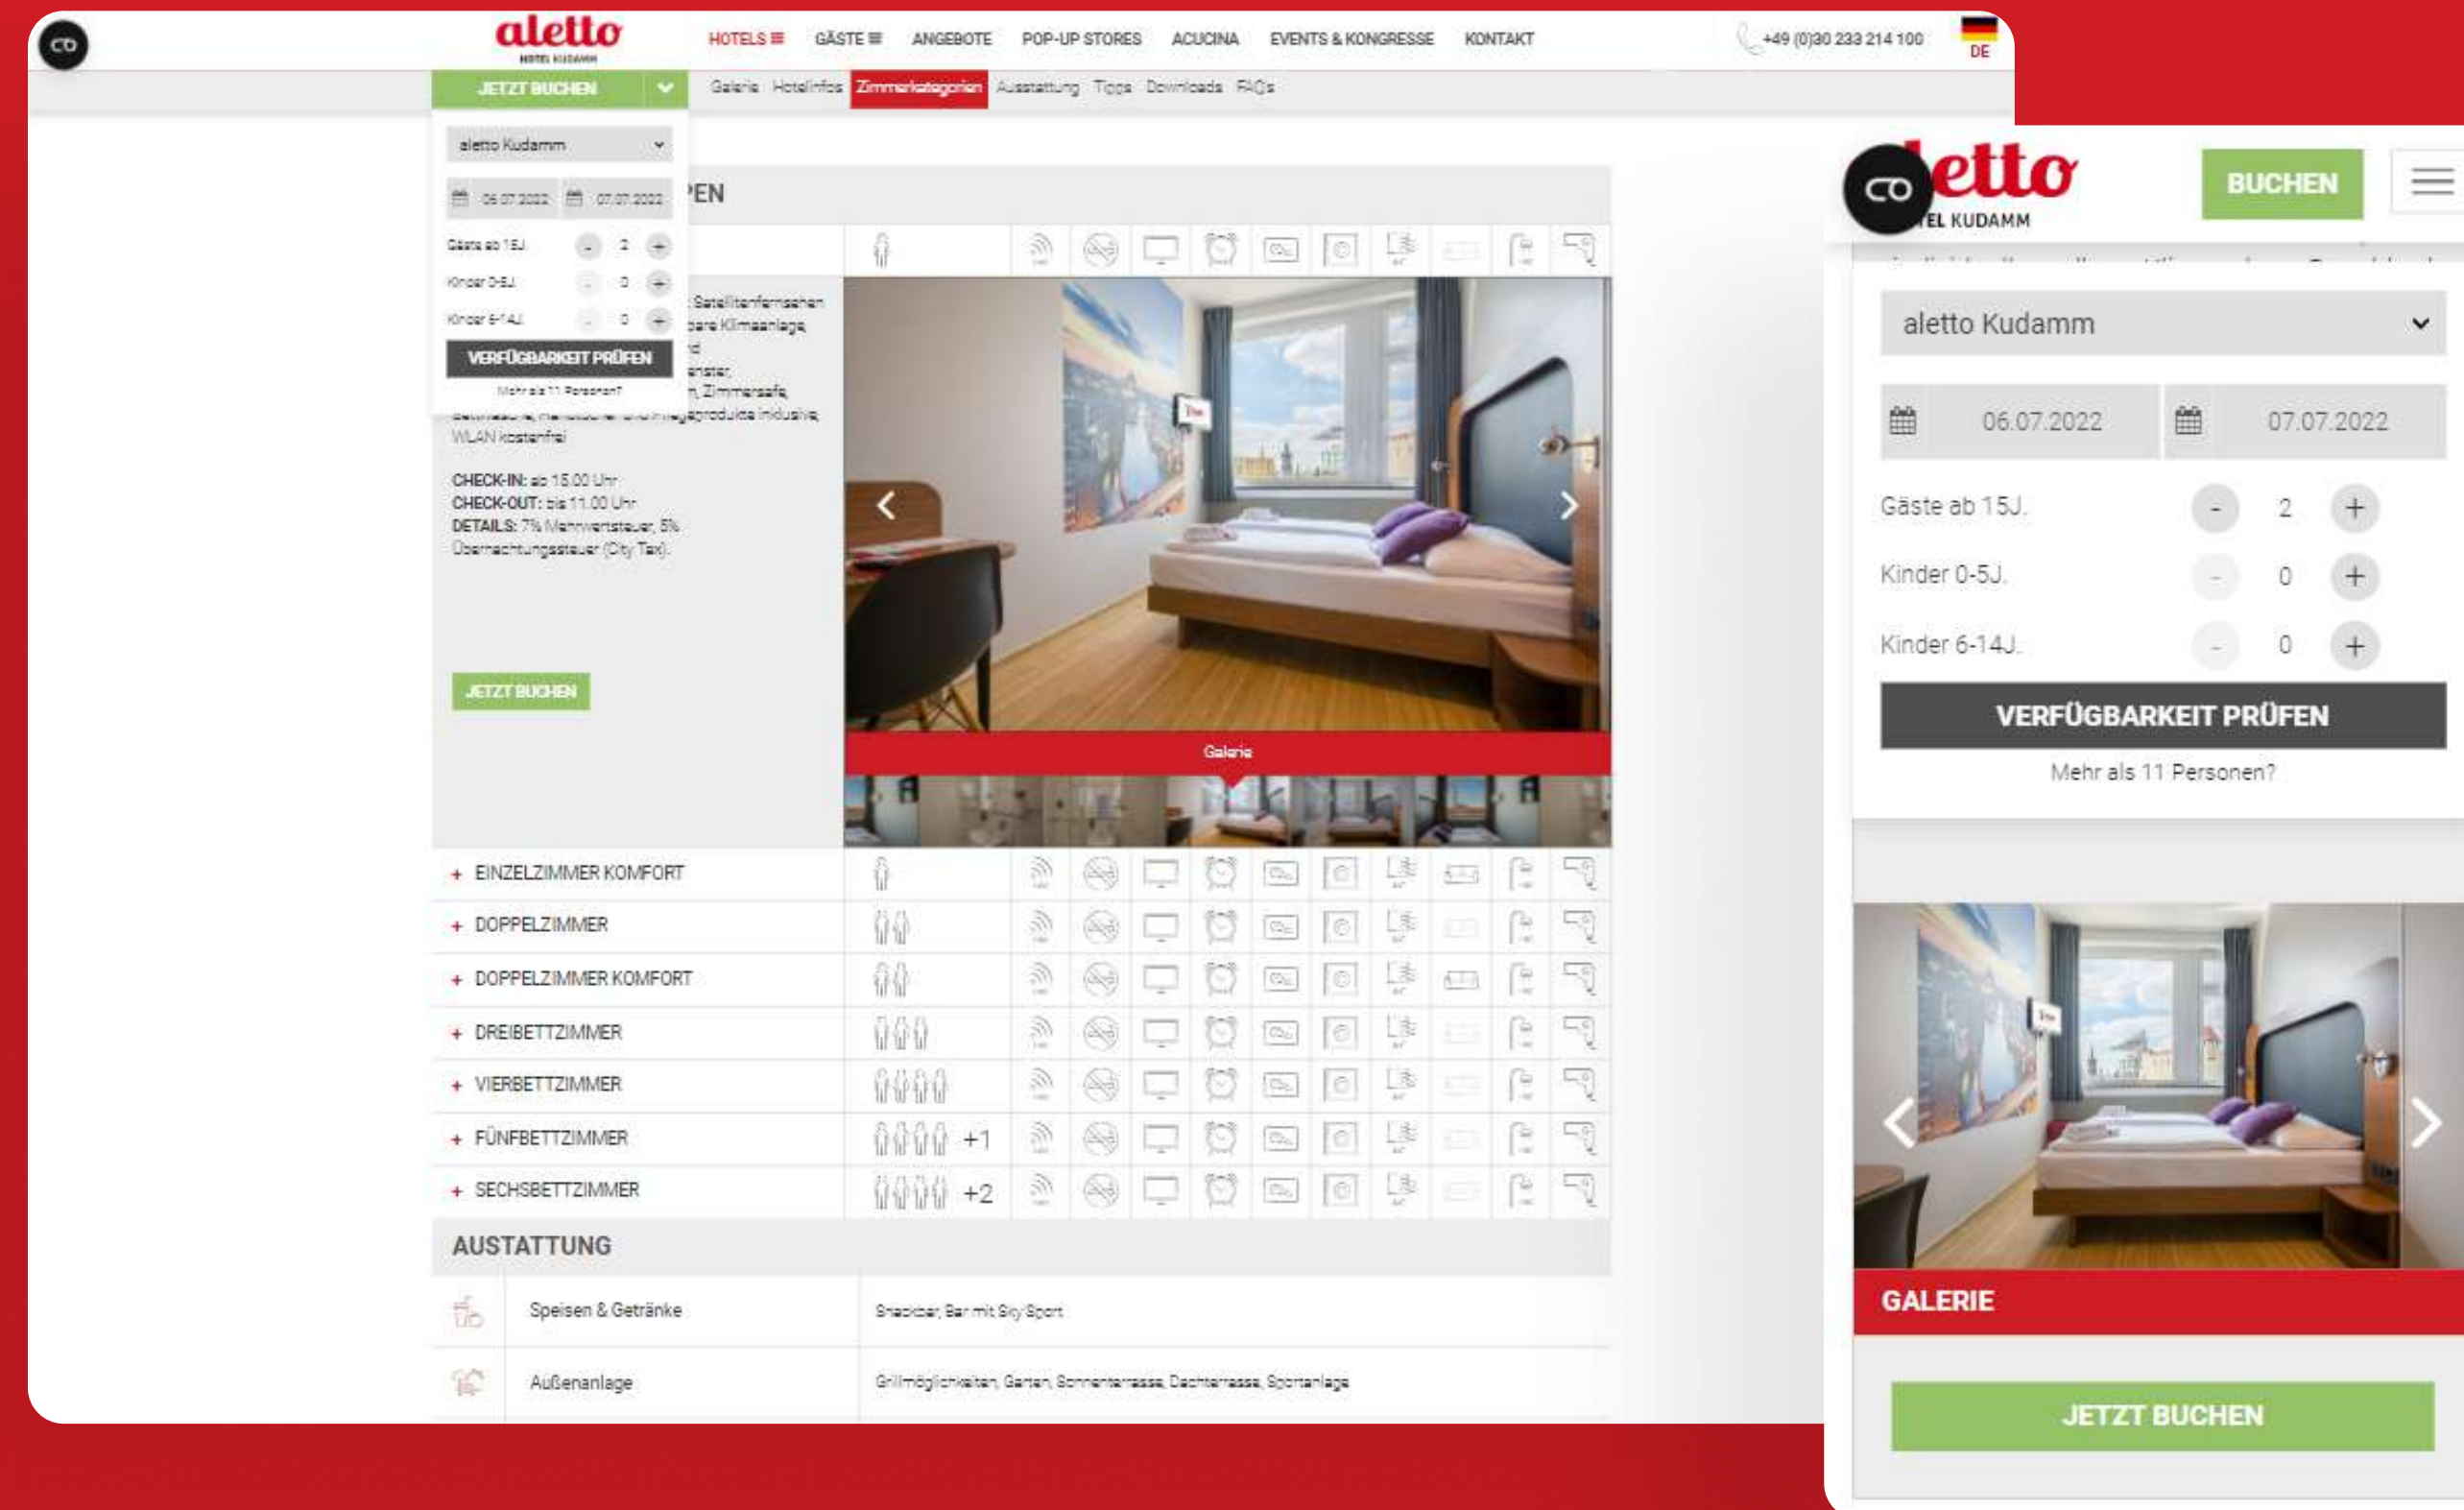

Franke selected Ventzke Media for the redesign of its global e-commerce platform. We are very pleased with the results. The designers and developers took the time to really get to know our business. The team was very responsive to our needs and delivered on them with great dedication. A modern and straightforward design was created, a design that is also easy for our customers to use. [...]

High-Performance E-Commerce App for Gardening and Landscaping

#hotel industry #website #typo3

Multilingual TYPO3 relaunch for Berlin's Hotel at Kudamm

The Client

The modern designed aletto Hotel at Kudamm offers cheap accommodation in Berlin. In the centrally located 3-star hotel guests can feel comfortable at any time without spending a lot of money. The aletto hotel can advise you optimally which of the beds is the right one for your individual requirements.

Disciplines

Prototyping & UX-Design

Agile Engineering (Website & CMS)

The Challenge

At the beginning of 2015, the aletto Hotel Kudamm commissioned us with the redesign and implementation of the outdated and not mobile usable website. The goal was to create a completely responsive website that presents the hotel in a contemporary way and displays important information. The main focus was to be on optimal usability in order to increase the conversion rate (bookings).

Milestones

2015: Start of collaboration / prototyping / UX

2015: Launch new website

Our Solution

The result of the 8-month project phase is a modern hotel website that leaves nothing to be desired. Visitors can book their hotel room on the new homepage easily and quickly, now also via mobile devices. The new imagery conveys modernity and attractiveness for different target groups. The aletto hotel can easily add future hotels to the chain via the TYPO3 backend.

Features

Custom TYPO3 Extensions

Multilingualism

Optimized booking process

Google Maps with points of interest

Connection to Internet Booking Engine (IBE)
